

System shall allow rim height movement in 6" increments from 7 1/2' to 10' by means of a pole from the playing surface. The vertical pole shall be 3 1/2" OD, 8 ga. zinc flow coated tubing. The extension arm shall be fabricated of steel and provide for 22" of extension from the face of the pole to the face of the backboard at official 10' rim height. Extension arm shall be mounted on a galvanized vertical pole that buries no less than 36" into the ground. The backboard shall be a minimum 48" x 36" molded fiberglass construction. Rim shall be a spring type and be mounted through the backboard directly into the extension arm to increase backboard durability. All steel components shall be galvanized or powder coated. Installation to be completed in accordance with manufacturer's instructions. Do not scale drawings. System shall have a 1-year limited warranty and weigh 165#.
